

STONE CARE®

TOUCH-UP ETCH REMOVER

FORMULATED FOR

POLISHED MARBLE,
TRAVERTINE & OTHER
CALCITE BASED STONES

EASY TO APPLY
For Lighter Stone

MB-11 MARBLE POLISHING POWDER

A UNIQUE COMBINATION OF SPECIALTY ABRASIVES AND CATALYSTS THAT MAKES THE ART OF MARBLE POLISHING RELATIVELY EASY TO IMPLEMENT WITHOUT THE NEED OF ANY POWER TOOL. MB-11 IS DESIGNED FOR SPOT POLISHING OF MOST "WATER STAINS" OR "RINGS" FROM POLISHED MARBLE, TRAVERTINE AND ANY OTHER CALCITE-BASED STONE.

BE CERTAIN TO TEST PRODUCT FIRST ON A SPARE TILE OR INCONSPICUOUS AREA FOR EXTRA CAUTION BEFORE USE.

DIRECTIONS FOR USE:

1. Use rubber gloves. Grab a clean white cloth or microfiber and fold it twice to make 4 layers. Wrap it tightly around your fingers/knuckles. Hold the loose portion of the towel in your hand so that it stays out of the way while you work. Dampen the wrapped fingers by spritzing them with water. Remove any excess water as you want your cloth damp, not wet.

2. Tap your damp cloth into the powder in the jar to get a THIN layer on your wrapped fingers/knuckles. There should be a consistent layer of powder, but no excess flaking off.

3. Rub the affected area vigorously with the wrapped fingers in a back-and-forth motion. This should be done quickly and with a lot of pressure. After about 10 back-and-forth motions, finish up with a few circular motions.

4. If you have any residue left do NOT wipe it away with the cloth until you have neutralized it with a pH-neutral cleaner like our MB-5. Use the loose part of the towel to wipe away the paste in a single motion. Spray the spot with a pH-neutral cleaner and buff clean with a SECOND microfiber cloth. Do NOT use the same cloth used to apply the product.

5. Inspect the repaired area and repeat the process with the same cloth as necessary. Adding more water if needed.
